

Micro-Z ULS

Wavelength dispersive X-ray fluorescence

WDXRF ultra-low sulfur analyzer
for ULSD and Tier 3 gasoline

Rigaku

POWERING NEW PERSPECTIVES

Micro-Z ULS

Ultra-low sulfur analyzer
delivers performance with
Rigaku durability.

Proven design and analytical functionality

Designed for ultra-low level sulfur analysis of diesel, petrol (gasoline) and other fuels, the Rigaku Micro-Z ULS wavelength dispersive X-ray fluorescence (WDXRF) analyzer features a novel design that measures both the sulfur peak and the back ground intensity. The ability to measure and correct for changes in background intensity delivers a better net peak intensity measurement, resulting in superior calibrations and enhanced real world precision. Rigaku Micro-Z ULS complies with ASTM 2622-10, ISO 20884 and JIS K2541-7 methods.

Euro 5 / US Tier 3 / China National V gasoline production and certification

Similar to current European (2003/17/EC, Jan 2009), California (CARB LEV III, 2012), Japanese, Israeli and South Korean regulations, the new US EPA Tier 3 rules specify that gasoline meet an annual average standard of 10 ppm sulfur by January 1, 2017. China will implement their similar National V regulations along this same timeframe. Large US refineries (those producing greater than 75 Mbpd) must comply with Tier 3 standards by 2017. Refiners producing below 75 Mbpd must meet Tier 3 regulation standards by 2020. For Tier 3, and consistent with the US EPA's performance based measurement system (PBMS), no specific analytical method is precluded. However, for laboratories worldwide, the benefit of the Rigaku Micro-Z ULS is that it strictly complies with ASTM D2622-10, eliminating the risk and uncertainty of attempting to implement other methods.

Ultra-low sulfur diesel (ULSD) production and certification

ULSD fuel enables the use of cleaner technology diesel engines equipped with advanced emissions control devices, resulting in significantly improved air quality. Annual emission reductions are estimated to be the equivalent of removing the pollution from >90 % of today's trucks and buses, when the current vehicle fleet is replaced (est. 2030). A 15 ppm specification, known as Ultra Low Sulfur Diesel (ULSD), was phased in for highway diesel fuel in the US beginning in 2006. Similar, albeit lower, 10 ppm limits are currently in effect in Europe, Japan, Israel, New Zealand and Australia. Other countries, like Chile and Canada, have the 15 ppm limit like the US. In addition, Russia and China are both rapidly phasing in ULSD. Likewise for ultra-low sulfur gasoline, for laboratories worldwide, the benefit of the Rigaku Micro-Z ULS is that it strictly complies with ASTM D2622-10, delivering easy-to-use and cost-effective compliance validation.

What is XRF?

In X-ray fluorescence (XRF), an electron can be ejected from its atomic orbital by the absorption of light (photon) from an X-ray tube. When an inner orbital electron is ejected (middle image), a higher energy electron transfers to fill the vacancy. During this transition, a characteristic photon may be emitted (right image) that is of a unique energy for each type of atom. The number of characteristic photons per unit time (counts per second or cps) is proportional to the amount of that element in a sample. Thus, qualitative and quantitative elemental analysis is achieved by determining the energy of X-ray peaks in a sample spectrum and measuring their associate count rates.

X-ray fluorescence schematic

How does WDXRF work?

Wavelength dispersive X-ray spectroscopy (WDXRF) is a method used to separate and measure the characteristic fluorescent X-rays emitted from a sample. The technique employs an analyzing crystal to spatially spread the X-ray light, much like a prism spreads visible light into its component colors. The wavelength of the impinging X-ray and the crystal's lattice spacings are related by Bragg's law and produce constructive interference when they satisfy the Bragg equation. The X-rays emitted by the sample are collimated by parallel metal blades (collimator) and irradiate an automatically selected analyzing crystal at a precise angle. X-ray light diffracted by the analyzing crystal is spatially spread out, so that characteristic photons may be collected by a detector positioned at a precise angle to record an X-ray intensity of a specific element.

Like a prism spreads the spectrum of visible light, so the analyzing crystals disperse light in the X-rays spectral region.

ASTM D2622-10, ISO 20884 and JIS KI2541 -7 compliant

Superior optics for reliable performance

The Rigaku Micro-Z ULS is the ideal solution for sulfur analysis of petroleum based fuels, with a lower limit of detection (LLD) of 0.3 ppm sulfur. Employing robust fixed optics in a vacuum environment, and featuring a specially designed doubly curved RX9 analyzing crystal, the Micro-Z ULS delivers consistent high-intensity measurements.

Movable slit provides background correction

The unique Rigaku automatic background correction enhances the goodness of the calibration fit, providing unmatched precision for short-term repeatability and long-term reproducibility.

Schematic of the close-coupled optical design. Note that the moveable receiving slit allows for measurement of both peak and background intensity.

Tier 3 ready

Petrol • Diesel • ULSD • Gasoline

Designed for routine non-technical operation

Specifically designed for non-technical users, all operations—from calibration through routine analysis—can be performed via the easy-to-use interface. The analyzer can be powered by any standard wall AC outlet.

High resolution WDXRF spectrometer

A unique doubly curved analyzing crystal delivers superior resolution for sulfur that ensures the required performance for production and validation of ULSD and Tier 3 gasolines. With the ability to perform automatic background corrections, Micro-Z ULS is strictly compliant with ASTM D2622-10. As a vacuum type design, no helium (He) gas is ever required. And the spectrometer features easy maintenance for the vacuum seal system.

Instrument status, through to analytical results, are selectable with the touch of a finger.

Calibration results using Micro-Z ULS (units: ppm)

Material	Diesel fuel	Isooctane (for gasoline)
Calibration range	0 – 100	0 – 100
Accuracy	0.49	0.37
LLD	0.3	0.3

(a) Diesel fuel

Run #	Average (mg/kg)	Difference (mg/kg)
1	8.0	0.3

Repeatability results for Micro-Z ULS (ASTM D2622-10)

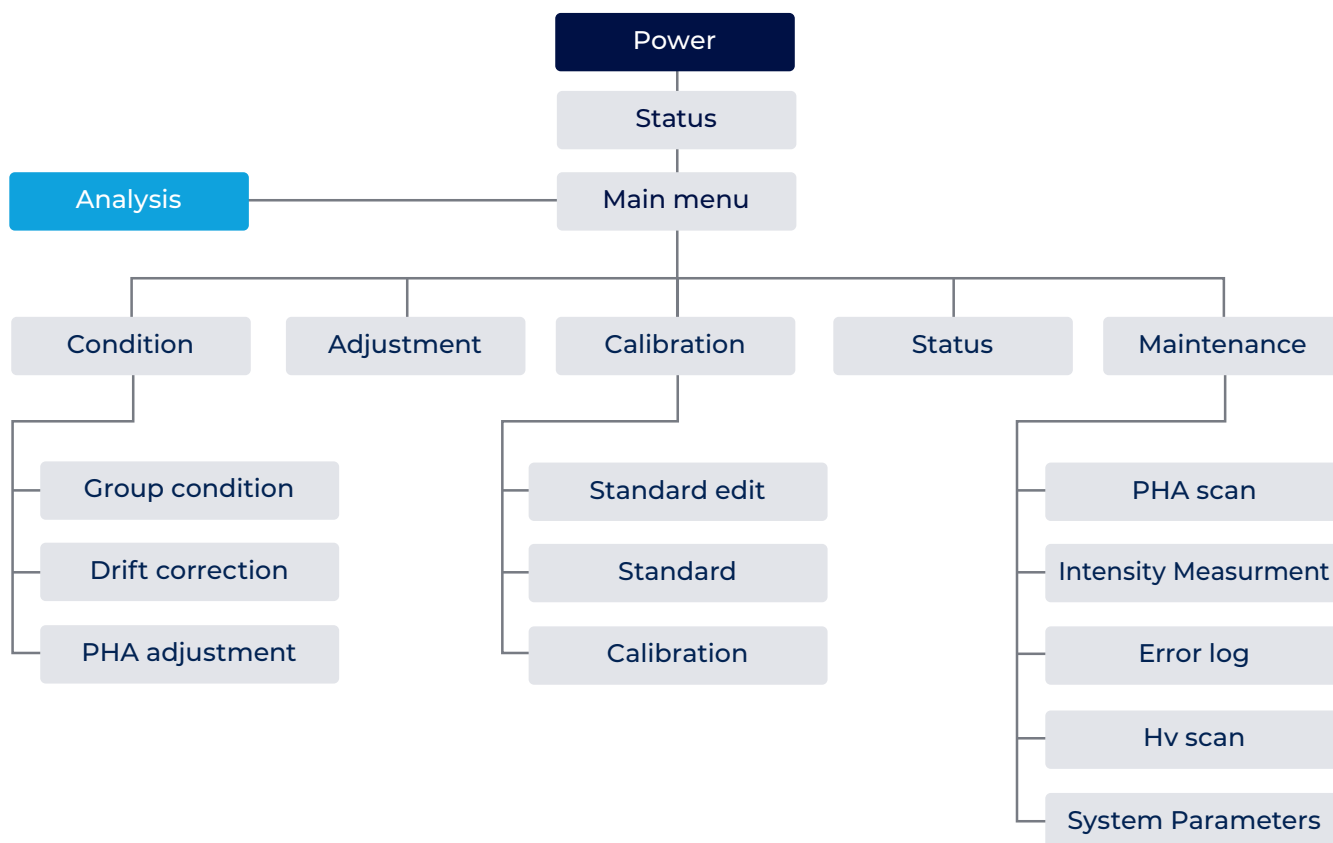

Calibration curve for each material of Micro-Z ULS

User interface

Menu navigation

Specifications

Instrument
Wavelength dispersive X-ray fluorescence analyzer, Includes vacuum pump
Element range: sulfur (S), LLD = 0.3 ppm
Application: analysis of fuels for sulfur content
Single measurement position (std. 35 mm cup)

Supported methods
ASTM D2622-10
ISO 20884 and JIS K12541-7

Excitation
40 kV Cr-anode X-ray tube
40 W max power

Detection
Doubly curved RX9 analyzing crystal
Sealed proportional counter
Fixed optics with switchable receiving slit, to select peak or background
Pulse height analyzer (PHA)

Atmosphere
Sample analysis in air
Optics are under vacuum

Environmental conditions
Ambient temperatures 15 – 28°C
Relative humidity <75% non condensing
Vibration undetectable by human
Free from corrosive gas, dust, and particles

Dimensions / power
Analyzer: 450 x 410 x 500 mm, 40 kg
Pump: 300 x 120 x 240mm
100-120 VAC, 15 A or 200-240 VAC, 10 A

Computer:
Embedded dedicated processor
Proprietary operating system

Software
Up to 10 calibrations
Up to 30 standards per calibration
Selectable analysis time (up to 999 s)
Drift correction
Pulse height analyzer (PHA) adjustment

User interface
LCD display
Embedded computer
Membrane keypad and navigation

Options
Thermal dot printer
Ethernet(TCP/IP) or RS232C data output

Backed by Rigaku

Since its inception in 1951, Rigaku has been at the forefront of analytical and industrial instrumentation technology. Today, with hundreds of major innovations to our credit, the Rigaku Group of Companies are world leaders in the field of analytical X-ray instrumentation. Rigaku employs over 1,400 people worldwide in operations based in Japan, the U.S., Europe, South America and China.
